- Significance: This building is a vestige of Montgomery County's trolley car era, when electric streetcar lines introduced into the area between Georgetown and Rockville encouraged the County's suburban development. The Chevy Chase to Great Falls Land Corporation purchased a 146 acre tract in 1912 and then contracted with the Washington and Great Falls Railway and Power Company to construct a streetcar line, conveying a 30-foot wide strip of land along the proposed route. (Bradley Boulevard lies on the bed of these railway tracks.) The power station was specifically designed in the style of a period farmhouse to blend in with its physical environment. The trolley line was discontinued in the 1920's and in 1928 the transformer station was sold to James L. Richards, an architect who converted it into a residence, receiving an architectural award for his work. He sold the building to the present owners in 1946.

DESCRIBE THE PRESENT AND ORIGINAL (IF KNOWN) PHYSICAL APPEARANCE

Built c.1912 this building was erected to boost electricity for the Washington and Great Falls streetcars which ran from Chevy Chase to the Great Falls Hotel. In 1928, after sitting idle for several years, an architect, James L. Richards, converted this booster station to a residence. Mr. Richards received an architectural award for his work.

The original 1910 structure measured 18' x 30'. It is constructed of uncoursed rubblestone said to have been laid up by an Italian stonemason and sits one hundred yards from Cabin John Creek facing north. The walls are eighteen inches thick. None of the windows are alike nor are they symmetrically arranged. They are a random assortment of casement windows, flanked by board shutters. All the windows have flat arches with keystones. The wooden paneled north (front) door, is surmounted by a paneled transom and is flanked by three-paned sidelights. Mr. Richards added a brick-floored, screened-in porch to the east and a one story brick addition to the west. This addition contains a powder room, breakfast room, kitchen and pantry.

The house has a gable roof. There is an interior chimney at the

center of the south wall.

The first floor of the interior of the house is one large room. Built-in bookcases and a closet flank the fireplace on the south wall. The floors are random width maple. At the southeast corner is a two flight open string staircase. At the first landing is a door which leads out to the (east) screen porch. There are three bedrooms and a bathroom on the second floor. At the time of its conversion from a trolley booster station to a residence Mr. Richards applied plaster directly on the stone work. This causes the house to sweat, and produces mildew in summer. The west addition is small and compact. Nothing has been done, subsequent to the 1928 renovation, to modernize the kitchen.

The house is surrounded by one and a half acres of heavily wooded and vegetated land.

STATEMENT OF SIGNIFICANCE

1912-14

BUILDER/ARCHITECT

This building is a vestige of the "trolley car era" of Montgomery County's history. In the early 1900s an electric railroad was built, linking Georgetown and Rockville, one of several streetcar lines introduced in the area, which encouraged the development of Montgomery County as a Washington, D.C. suburb. The Washington and Great Falls Railway and Power Company built a transformer station near the tracks in the style of a period farmhouse. The house is now a residence along Bradley Boulevard, the road which was later laid on top of the trolley tracks at the end of the "trolley car era" in the County -- the mid 1920s.

The old station house is situated upon a portion of a 146 acre tract purchased on January 1, 1912 from John McDonald by J. Walter Long of the Chevy Chase to Great Falls Land Corporation. On December 9 that year, the Corporation contracted with the Washington and Great Falls Railway and Power Company to construct a streetcar line. To this end it conveyed a strip of land 30 feet wide along the proposed route, with the provision that the railway should be completed and operating within two years. Thus it appears that the transformer station was constructed between December of 1912 and December of 1914. What is today known as Bradley Boulevard (running in front of the subject building) was originally constructed during this period as the bed for the railway tracks. The power station was specifically designed to present itself as a rural farmhouse, blending in with its physical environment.

The trolley line was discontinued in the 1920's, and on June 27, 1928, the Bradley Hills Syndicate, Inc., and the Washington and Great Falls Investment Company conveyed to James L. Richards one acre of land and "the building...formerly used as a transformer station..."3 Richards was the first to occupy the power station, transforming it into a private residence. On May 28, 1946, Richards conveyed the building to the present owners.

The building appears to be an old, stone farmhouse, but was actually built in the early 1900's to house the power-generating equipment for the trolley line. inally, there was no road through here, but Bradley Blvd. was built to carry to the tracks through Cabin John Valley towards Potomac. After the trolley line was abandoned the building became a private home. It faces north, and the wide, entrance door here is flanked by an uneven window arrangement. Double, twelve-paned, casement windows sit west of the door and smaller casement windows are set deep in the walls at different heights, at both ends of the building. The second story has two bays of narrow, eight-paned, double casement windows. All windows are topped by keystoned, flat arches and altogether the structure is of excellent workmanship and design. There is an internal chimney stack on the east end of the roof. later, one-story, brick wing is attached to the west wall and there are "antique" appearing stone and log outbuildings nearby.
